Squadron commander: Airmen are greatest asset

The following is an excerpt from a speech delivered by Maj. Joseph Zackaricz during the ceremony in which he took command of the 714th Aircraft Maintenance Squadron.

Ever since the KC-10 arrived here at McGuire, the 714th Aircraft Maintenance Squadron has been involved in nearly every single contingency and humanitarian mission the Air Force has successfully accomplished.

Whether it was an operation such as Restore Hope, Enduring Freedom, and Iraqi Freedom, or flying refugees out of a war-torn Kosovo, or supporting relief efforts to provide aid to victims of natural disasters, we have had and continue to have aircraft in the fight. These aircraft were made mission-capable through the blood, sweat and tears of the 714 AMXS, the back bone that has worked hand in hand with our active-duty brethren to enable this wing to successfully fly a complex and aging weapons system to its fullest capability.

I am amazed every day at what this squad-

ron is able to accomplish, and I am extremely proud to be a part of it.

As a wing, it is our mission to train for active duty in order to enhance our nation's air mobility capability and to be combat-ready so we can augment our active-duty counterparts and ensure that our aircraft are fully utilized.

It is my goal to provide a highly trained and fully qualified aircraft maintenance workforce capable of performing anywhere in the world at any time. We will continue to strengthen the relationship with active-duty maintainers and our aircraft operators.

Following another highly successful year, we find ourselves once again facing numerous challenges. We just sent another team overseas. We are looking at another deployment in the near future. We are continuing to prepare for multiple inspections. Not to mention the turbulent times we are in with an ever-changing threat to our nation and complex fiscal challenges.

Yet despite numerous uncertainties and

some seemingly insurmountable demands, there is no doubt in my mind we will once again succeed. We possess a critical strategic capability that touches all of the enduring contributions such as air superiority and rapid global mobility, that when combined makes us the greatest Air Force in the world.

Our Air Force's mission is clear – to fly, to fight and win. And its greatest strength is our Airmen. So it will be my charter to ensure our squadron's men and women, our greatest asset, are provided with the best I can give, so that they can be what they are – our future.

The road ahead is not easy, but through our conviction, hard work and integrity, the way ahead will always be clear. The demands on everyone will be difficult. However, we are all accountable for our success, and as team, we will succeed through personnel accountability, selfless dedication and trust.

You are all expert craftsman, and that collective expertise and innovation will provide the tools we need to travel along the road before us. As always, I ask for your best, your integrity and your service, and you should expect the same from me.

YEAR-ROUND EXERCISE PROGRAM PAYS DIVIDENDS

By Senior Airman Johandy Martinez
514th Aircraft Maintenance Squadron

Do you ever look at the calendar and realize that your fit-to-fight test is coming up and think, "Oh, no! I have to start working out?"

Airmen who fall into this category, but who want to avoid sabotaging their careers with a failed fit-to-fight test, should not wait to start a regular year-round exercise program.

A key component to improving your test score is being active all year. Instead of rushing into a new fitness regimen a few months prior to the test, you could get better results by intensifying the workouts that you've already been performing.

A year-round exercise program helps you with more than your fight-to-fight test. The test occurs just once or twice per year, but your overall fitness affects your quality of life every single day. A physically active lifestyle helps in many ways by:

- controlling weight,
- combating diseases and other health conditions,
- improving mood,
- promoting better sleep,
- maintaining healthy bones, muscles and joints,
- enhancing work, recreation and sport performance, and
- improving sex drive.

For those who aren't sure where to start, I recommend trying some of the many group exercise sessions available at most fitness centers. When you participate, pay attention to what the instructors are saying because not only are they pushing you to break a sweat, but they are also teaching you how to exercise properly so that you may take it home with you. They are certified instructors, so do not feel embarrassed to pick their brains about anything.

The 1.5-mile run is often cited as the most challenging component of the Air Force fitness test, so here are a few tips to help you prepare.

Train for speed – Long, slow jogging is useful for overall fitness, but since our test is timed, speed is very important. Improving stride rate, more so than stride length, is the best way to improve speed over longer distances. See how many times your right foot hits the ground during a 30 second run at your usual pace, and then set a reachable goal to increase that rate each time you run. Incremental improvements over time will lead to great rewards.

Peddle power – Join a spin class, bike some hills or climb some stairs once or twice a week, especially if your muscles are sore from running. These low-impact workouts will boost your level of fitness while adding leg strength to make a difference in your running times. Hard work with no extra pounding!

Take a dip – Adding swim sessions to your exercise regime helps work many of the body's smaller muscles which contribute to a more balanced running stride. Swimming also helps with breathing control, which can translate into a more efficient running pace.

Trial training – Running regular 1.5 mile trial tests throughout the year helps you gauge where you stand. Performing well on a trial test is a source for positive motivation, while performing poorly may reveal the need to increase your exercise program's intensity. Frequent trial runs help you adapt to the run, which can reduce mental and physical stress during the test.

Finish strong – Finish your runs with a burst of near-maximum speed. Over time, increase the distance of the burst. You should be gasping for air at the end. Pushing your body to its threshold will lead to overall running improvement.

Maj. Blaine Howell (left) and Lt. Col. Andrew Solleder recently returned from a deployment to the 603rd Air and Space Operations Center at Ramstein Air Base, Germany, where they helped conduct air mobility operations over Europe and Africa.

Air mobility experts conduct air operations orchestra

By Senior Airman Chelsea Smith
514th Air Mobility Wing public affairs

The flight of a single aircraft is just one instrument in the orchestra known as air operations. And just as some reservists specialize in playing a particular instrument, such as the KC-10 Extender or the C-17 Globemaster III, some specialize in conducting the overall orchestra.

These conductors plan, schedule and control every sortie from air and space operations centers located in specific geographic regions across the globe.

While the reservists from the 514th Air Mobility Operations Squadron perform their training here, when it comes to the real thing, they typically deploy to the 603rd Air and Space Operations Center at Ramstein Air Base, Germany. From there, they help conduct air mobility operations over a giant landmass encompassing Europe and Africa.

Three of the squadron's air mobility experts just returned here from a tour of duty at the center. They were initially called to duty from their civilian jobs duty with little time to prepare.

"Because the 603rd Air and Space Operations Center is manned solely to support daily operations, augmentation from the Guard and Reserve is necessary in response

to any emerging situation," said Maj. Blaine Howell, "Due to on-going contingency operations, the 603rd requested us, and we landed on-site within three days."

That type of readiness is the hallmark of the squadron's Airmen.

"There is a volunteer spirit within the people of the 514th AMOS," said Col. Michael Underkofler, 514th Air Mobility Wing commander. "They essentially have their bags packed, ready to leave, and they are willing to stay until the mission is completed."

The ease with which squadron's Airmen are able to plug into the 603rd AOC's air mobility positions within the center is due to their training, which combines home-station planning exercises with regular visits to the center.

"We acquire on-the-job training across multiple positions that enables maximum flexibility and interoperability," said Lt. Col. Andrew Solleder, a senior controller. "The close cooperation we enjoy between our squadron and the 603rd means we can provide Airmen who are fully trained and ready to execute the mission at a moment's notice."

This swinging door allows the reservists to shift gears from the training environment to the real mission environment very rap-

idly, Howell said.

And they're just as quick to shift gears to an off-duty mindset when appropriate. Frequent tours to Germany come with perks, as the Airmen have learned to balance work with play. They said they enjoy visiting many of the country's attractions and the ever-present eateries that serve Turkish Kebabs, which are pita bread sandwiches stuffed with slow-cooked sliced chicken, vegetables and Turkish dressings.

Overall the relationship between the squadron's Airmen and the operations center appears to be a win-win. The Airmen are able to perform important work in a favorable destination, and the operations center receives well-trained augmentation from ever-ready reservists.

Other winners in the arrangement are the Airmen's colleagues at the wing who work in other areas of the air mobility trade

"One of the fundamental mantras of the military is to pass on lessons learned," said Underkofler. "I anticipate that our Airmen will come back and tell their squadron commander or operations officer about procedural changes, technological advances and new systems training as well as the fun things to do while they are off duty, because that's an important part of the experience as well."

Combat Dining In

Theme: World War II, Celebrating the World's Greatest Generation

June 1

5-10 p.m.

\$15 for E-5 and below;

\$20 for E-6 to E-8

\$25 for E-9s & officers

- A trophy goes to the unit displaying the most enthusiasm while embracing the event's theme.
- Attire: work uniforms, with liberal combinations and additions permitted.
- Water-based weapons are encouraged.
- Volunteers needed. Contact Senior Master Sgt. Luisita Jordan at 609-754-9634.
